

SOURCES/ANALYZERS

Sources/Analyzers

Fiber Optic Test Equipment	300
Data Generators & Data Analyzers.....	310
Vector Modulation Generators & Analyzers	318
Transceiver Test Equipment.....	322
Microwave Test Equipment.....	326
Dimensional Measurements.....	342
Pressure & Temperature	344

Some HP products combine the functions of source and analyzer. These products usually take the form of matched stimulus and response test equipment that together can characterize a wide range of components and systems. These products include fiber optic test equipment, data generators and analyzers, transceiver test equipment, and vector generators and analyzers. Also included in this group are auxiliary components such as microwave couplers and detectors (microwave test equipment), amplifiers, and sensors.
