

Analog Scopes

LA314/LA314H 400 MHz/470 MHz

With four channels and wide 470 MHz bandwidth, these leading-edge analog oscilloscopes offer the highest level of performance available today.

Analog oscilloscopes offer unique benefits in solving specific measurement problems. The analog display provides important clues on relative frequency content of signals mixed together or the occurrence of low rep-rate events on repetitive signals. The LA314's meshless CRT effectively displays these "grey scaling" and "persistence" effects; and the LA314's ultra fast display update rate lets you see how the waveforms behave in real time.

The standard multipurpose trigger, wide input offset range, comprehensive cursors and counter make the LA314s truly universal oscilloscopes.

Specifications

DC - 470 MHz, 4-CH, 10 traces

Four channels up to 470 MHz are available, with CH1 and CH2 boasting the widest frequency range with highest sensitivity

(2mV/div). The fastest sweep speed is 500 ps/div.

Input offset function

Suitable for the observation of small signals superimposed on large signals. The DC input offset function features an offset equivalent to ± 500 div. max, which can be applied to CH1 or CH2.

Counter measurement function

Built-in 5 digit counter for frequencies up to 470 MHz.

Save/Recall up to 256 panel settings Just turn the FUNCTION knob to recall panel setups. Stores up to 256 settings in memory.

Power for FET Probe

Dedicated power supplies for 2 FET probes. Controls DC offset voltage of each probe as well.

TV/HDTV Synchronization

TV triggering is available for NTSC, PAL, (SECAM) and HDTV. Field (EVEN, ODD, BOTH) and line select functions are included.

TV Clamp Function

Easy observation of TV video signals with fluctuating average voltage. Back porch level of composite signals is fixed to ground level for display.

Typical Applications

- Video, especially VCRs and TVs.
- Data recording, finding servo anomalies, glitches and intermittent phenomena in the disk-drive head- signals.
- Eye patterns (for DVDs) in optical disk measurements.
- Wide-bandwidth noise measurements on magneto optical disks.
- Radar/Lidar burst measurements.
- Eye pattern measurements on ATM 155 Mbps signals.
